

Class Diagram

Libraries Used

- Retrofit - Network calls
- Glide/Picasso - Images from URLs
- Joda - DateTime calculations

Improvements

- Reorganize architecture to make more modular (ie. Less in MainActivity)
- Use RxJava Observables to handle asynchronous network responses (when receiving data and images from URIs)
- Fix Likes persistence
- Better design for multiple screen sizes, resolutions and orientations by using fragments and resource directory conventions. (Currently ideal on newer phones)
